

TEST TRANSMITTER TTX-3

The test transmitter TTX-3 is a battery operated transmitter unit to check the function of the Marque, Mini Marque and VDU-12 scoring stations. It is designed to produce the same signals as those from a miss distance indicator of the AS-100 family with 2-level FSK telemetry and CRC checksum.

The test transmitter has a six round salvo stored in memory and emulates a miss distance indicator during actual firing. The power output is, however, considerably lower and the range between TTX-3 and the scoring station is limited to about 100 meters.

The test transmitter TTX-3 is a small, handy box with a wire antenna for signal transmission. The TTX-3 has a built in rechargeable 12 V battery.

The operating temperature should be within 0-30° C, The storage temperature is 0 +70° C. Avoid humid conditions, which may cause condensation.

A battery charger is also supplied together with the TTX-3.

Dimensions: 155 x 185 x 65 mm, weight approx. 0,9 kg.
